

## Professional Statement

I am **Oyediran Mark Oladimeji**, a detail-oriented and driven cybersecurity enthusiast born on May 19, 2002. My passion for technology and commitment to protecting digital systems have fueled my pursuit of a career in cybersecurity. With a solid foundation in IT principles and a growing interest in identifying and mitigating cyber threats, I aim to contribute meaningfully to a secure digital environment.

I have successfully completed and passed the **ISC2 Certified in Cybersecurity (CC)** exam and the **Google Cybersecurity Professional Certificate**, and I continue to build skills in risk assessment, threat analysis, and security frameworks. I'm particularly focused on network security, incident response, and proactive defense strategies — all essential to ensuring data confidentiality, integrity, and availability.

I've also explored the absolute basics of Python and SQL, completed introductory labs on attacking and defensive security via TryHackMe, and practiced using tools like Nmap, Wireshark, and Kali Linux. These experiences are helping me better understand real-world cyber threats and how to counter them effectively.

I'm eager to join a forward-thinking team where I can apply my growing expertise, collaborate with seasoned professionals, and contribute to strong cybersecurity strategies. My adaptability, analytical mindset, and passion for continuous learning position me as a valuable future asset in the cybersecurity space.

*This is a living statement — one I'll continue to refine as I grow in the field and expand my capabilities.*
